Dear JPMorganChase Recruitment Team,

I am writing to express my strong interest in the Data and Artificial Intelligence Summer Analyst program in Singapore. My ultimate career goal is to become a dedicated AI engineer, and I am looking for an environment where technology is built to solve real problems at scale.

What truly draws me to JPMorganChase is your firm's commitment to responsible innovation. Engineering at JPMorganChase is not just experimental but embedded securely to support critical functions. That philosophy resonates deeply with me. In a space where many rush to build flashy products, I value data governance, risk management, and the safety of the end user above everything else.

During my time creating applications for nonprofit organizations and youth forums, I realised that the best engineering happens when technical teams genuinely care about the communities they serve and when we think from user's perspectives. JPMorganChase shares this exact mission of using actionable intelligence to drive positive change for diverse global communities.

I want to work at JPMorganChase because I want to learn from global experts who do things the right way. I am highly collaborative, I take data privacy seriously, and I am driven to create enterprise systems that deliver measurable value built on a foundation of trust. Furthermore, I strongly believe that we are no longer in an era of survival of the fittest, but in an era of survival of the adaptable. I am highly motivated, fully adaptable, and a quick learner who is ready to take on any challenge.

Thank you for your time and consideration. I look forward to the opportunity to speak with you and share more about how my mindset aligns with your team.

Sincerely,

Alagarsamy Duraikumaran
