Aspiring 2027 Information Systems and Technology Intern at Apple

Dear Recruiting Team,

My journey in technology has been defined by a clear objective which is building scalable, intelligent systems that create real world impact as a dedicated AI Engineer. Apple's Information Systems and Technology (IS&T) organization stands out not just for its global complexity, but for its role as the central nervous system supporting 2.5 billion active devices and processing billions of secure transactions. I am writing to express my strong interest in joining your team as a 2027 IS&T Intern in Singapore, where I can bring my technical rigor and passion for modern engineering to your dynamic teams.

In my current role as a Generative AI Engineer Intern at TATA Consultancy Services (TCS), I experience firsthand what it takes to build and deploy enterprise-grade solutions. I engineered a real-time Voice AI agent integrating Google's Gemini model with MCP, webhooks, and a lip-syncing frontend for client-facing applications. Additionally, I designed a Management Based Game simulating complex business decision-making and authored a quantum computing research report on hybrid quantum-classical transformer approaches. These experiences taught me to responsibly leverage AI development tools, critically evaluate outputs, and ensure that the final solutions are as resilient and secure as they are innovative.

I thrive in fast-paced environments where collaboration drives results. During Deep Learning Week 2026, my team was named a Finalist for building CrashGuard AI, an end-to-end vision and LLM pipeline that automates critical emergency reporting using Python, React, and Ollama. Similarly, securing 2nd Place at the Microsoft x NTU Product Club Hackathon with PromptHub reinforced my ability to collaborate across the stack and iterate rapidly based on feedback. Whether I am developing web interfaces with JavaScript and React, or engineering server-side infrastructure with Python and Java, my focus is always on delivering secure, reliable code that reduces manual effort.

Beyond technical execution, I understand how to apply technology within a broader business context. Through the NTU PEAK program with SAP, I proposed a solution integrating the Joule AI Agent to optimize procurement sustainability, delivering recommendations that reduced material waste by 20%. Furthermore, serving as the CCA Liaison Director for the NTU Students' Union required coordinating operations for over 200 CCAs. This leadership role sharpened my ability to communicate complex ideas, and deliver results under pressure.

I am eager to bring this blend of hands on technical capability, business awareness, and collaborative energy to Apple. Thank you for your time and for considering my application.

Yours sincerely,

Alagarsamy Duraikumaran
