Aspiring 2027 Summer Analyst at JP Morgan Chase & Co.

Dear Recruiting Team,

My journey in technology has been defined by a clear objective which is building scalable, intelligent systems that create real world impact as a dedicated AI Engineer. JPMorgan Chase stands out not just for its multi-billion-dollar investment in technology, but for its commitment to deploying secure, high quality solutions that serve millions globally. I am writing to express my strong interest in joining your team as a 2027 Summer Analyst, where I can bring my technical rigor and passion for modern engineering to your agile teams.

In my current role as a Generative AI Engineer Intern at TATA Consultancy Services (TCS), I experience firsthand what it takes to build and deploy enterprise-grade solutions. I engineered a real-time Voice AI agent integrating Google's Gemini model and a lip-syncing frontend for client-facing applications, designed a Management Based Game that simulates complex business decision-making and worked on a Quantum Computing Research Paper where I explored various methods to alleviate the current bottlenecks of AI. These experiences taught me to responsibly leverage AI development tools, critically evaluate outputs, and ensure that the final solutions are as resilient and secure as they are innovative.

I thrive in fast-paced environments where collaboration drives results. During Deep Learning Week 2026, my team was named a Finalist for building CrashGuard AI, an end-to-end vision and LLM pipeline that automates critical emergency reporting. Similarly, securing 2nd Place at the Microsoft x NTU Product Club Hackathon with PromptHub reinforced my ability to collaborate across the stack and iterate rapidly based on feedback. Across these projects, my focus is always on delivering secure, reliable code that reduces manual effort.

Beyond technical execution, I understand how to apply technology within a broader business context. Through the NTU PEAK program with SAP, I proposed a solution integrating the Joule AI Agent to optimize procurement sustainability. Furthermore, serving as the CCA Liaison Director for the NTU Students' Union required coordinating operations for over 200 CCAs. This leadership role sharpened my ability to communicate complex ideas, and deliver results under pressure.

I am eager to bring this blend of hands on technical capability, business awareness, and collaborative energy to JPMorgan Chase. Thank you for your time and for considering my application.

Yours sincerely,
Alagarsamy Duraikumaran
